

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

includes species of probable occurrence in the region, but not as yet positively known to the writer to have been found there. As most of them are natural to the region, the conservatism here shown is the more commendable. As said in the 'Introduction': "That the present paper may serve as a basis for future observations is the chief excuse for its existence. With this purpose in view much care has been exercised to avoid the inclusion of any but perfectly reliable records. All but four species have been personally identified by the writer, either in the field or from specimens in local collections; and these four exceptions have been admitted only upon what has been considered satisfactory evidence of their occurrence." The paper is based mainly on observations made by the writer between February 8, 1890 and April 9, 1894. Of the 183 species noted, 30 are classified as permanent residents, 61 as summer residents, and 57 as transient visitors, and these latter are further subdivided in accordance with their manner of occurrence. The annotations are often quite extended, relating to the nesting habits of the species as well as to their relative abundance and seasons of occurrence. The nomenclature is that of the A. O. U. Check-List, and includes the names of the higher groups as well as those of the species. Also various familiar text illustrations are introduced.—J. A. A.
